Dear Hiring Manager,

I am excited to apply for the Node.js Backend Developer position with Filta Global.

I am a full-stack software engineer with experience building scalable web applications, AI-powered platforms, automation systems, and backend services using TypeScript, JavaScript, Node.js, Next.js, Laravel, Python, PostgreSQL, and modern cloud-native development practices. My work has involved designing REST APIs, integrating third-party services, developing business logic, managing relational databases, and deploying applications with Docker while maintaining a strong focus on performance, security, and maintainability.

Recently, I have been developing platforms such as **SQAuto**, an AI-assisted SQL migration and validation platform, **CipherLens**, an AI-powered security scanning platform, and **Atelier**, a modern SaaS application built with Next.js and TypeScript. These projects required building scalable backend services, API integrations, authentication systems, database design, and production-ready architectures while leveraging AI development tools such as Claude Code, Codex, GitHub Copilot, and ChatGPT to accelerate development without compromising code quality.

I enjoy solving complex engineering problems, collaborating with cross-functional teams, and building reliable systems that scale. The opportunity to contribute to New Zealand's leading marketplace while working on modern backend architecture, microservices, and high-volume transaction systems is particularly exciting to me.

GitHub: <https://github.com/EisenDev>

Thank you for your time and consideration. I would welcome the opportunity to discuss how my technical background, problem-solving mindset, and AI-assisted development workflow can contribute to your engineering team.

Sincerely,

Arjay Escabas
