Dear Hiring Manager,

I'm excited to apply for the Web Developer position at My Biz Niche. I have experience building and maintaining modern web applications, business platforms, dashboards, and AI-powered systems using HTML, CSS, JavaScript, TypeScript, React, Next.js, Tailwind CSS, Laravel, Python, PostgreSQL, and REST APIs. My work has focused on creating responsive, high-performance websites and applications that are reliable, maintainable, and user-friendly. I enjoy solving technical challenges, collaborating with cross-functional teams, and taking ownership of projects from planning through deployment. AI-assisted development is a core part of my workflow, and I regularly use Claude Code, OpenAI Codex, Gemini CLI Agents, GitHub Copilot, ChatGPT, and Google Antigravity IDE with Claude models to accelerate development, debugging, testing, documentation, and code reviews while ensuring the final implementation meets production standards. Although my recent projects have primarily involved custom web applications rather than CMS-focused development, I am comfortable working with and learning platforms such as WordPress, Shopify, and Duda when required. You can view my portfolio at <https://arjayescabas.me>, my live projects at <https://zeraynce.com>, <https://atelier-staging.zeraynce.com>, and <http://sqauto.zeraynce.com>, and my GitHub at <https://github.com/EisenDev>. I would appreciate the opportunity to contribute my technical skills, attention to detail, and commitment to delivering high-quality web solutions as part of the My Biz Niche team.

Kind regards,

Arjay Escabas
